## INSTALLATION GUIDE FOR AREZZO STAINLESS STEEL LAMP POST 7575-000

[View Arezzo Lamp Post 7575-000](#)

## NOTE

The light fitting must be installed by a qualified electrician.  
The mains supply must be disconnected at the fuse box before starting installation.

It is not sufficient just to turn off the power at the switch.

### Assembly and installation.

1. Open up the junction box that is located inside the post.
2. Carry out electrical installation.  
Blue lead = Neutral (N)  
Brown lead = Live (L)  
Yellow/Green lead = Earth
3. Close the junction box and place it back inside the post.
4. Install the lamp post.
5. Fit the bulb and glass.
6. Refit the cover over the light fitting (where applicable).
7. Switch on the mains supply. The light is now ready for use.

### Light fitting made from stainless steel.

The light post is coated with a protective varnish, but if it is exposed to a harsh environment (salty environment, coastal location, livestock stables, etc.) It is recommended that the surface is rubbed with a neutral oil and then wiped with a soft cloth to prevent staining. This should be done at least four times a year if the environment is very harsh.
